

seekr

a compact wearable that lets you see, hear, and feel

About Seekr

Seekr is a compact wearable that lets you see, hear and feel. It is aimed to be a lifelong visual companion to the elderly and visually-impaired population (VIPs).

How can you help us?

We are looking to increase the functionality of Seekr with Computer Vision and AI. Join us to increase independence and provide companionship to the elderly and VIPs.

Why do we need Seekr?

Many existing products are created without the accessibility of the visually impaired in mind. Worse yet, existing visual assistive devices are not customer-centric. We designed Seekr so that it allows the visually-impaired user to seamlessly integrate into their social surroundings. They can experience new environments and conduct everyday tasks without having to rely on others.

Seekr, your visual companion
